

The WSDOT Chip Seal project will be starting back up again Friday August 3, which will include work Along State Route 903 from Cle Elum west towards Lake Cle Elum.

Activities are expected to cause travel delays so drivers should plan accordingly.

For more information about this project please see the WSDOT South Central Region construction Webpage or contact Project Engineer Alex Sanguino at 509-222-2403 <https://www.wsdot.wa.gov/regions/southcentral/construction/>

The WSDOT Peoh Road Bridge to Elk Heights Road Vicinity concrete rehabilitation project on westbound I-90 will need to shut down westbound Indian John Hill Rest Area intermittently through the summer and potentially as late as October. As an interim measure, a temporary rest area is located on Cle Elum's Railroad Street south of Wye Park between Oakes Avenue and South Cle Elum Way. This area is anticipated to receive high traffic volumes during peak travel times and will be accessible 24-hours per day during Indian John Hill Rest Area temporary closures.

For more information on this project, please see the WSDOT South Central Region construction webpage or contact Project Engineer Jerry Wood at 509-577-1859 <https://www.wsdot.wa.gov/regions/southcentral/construction>
